Trans. of Tsvetnyye Metally (USSR) 1959, v. 32, no. 5, p. 16-22.

A literature survey shows that, the contact methods for measuring density, the hydrostatic method is now most widely used; it is based on the piezometric principle. Piezometric instruments are satisfactory for the measurement of density in suspensions of low specific gravity (up to 1.4 kg/litre). The method which gives the most satisfactory results and has the greatest development potential is the contactless method, which is based on the relationship between the rate of absorption of gamma-radiation and the density of the suspension; it is therefore free from the disadvantages
